

IAM Access Review

Maple Financial Services — Simulated Portfolio Assessment

Executive Summary

This simulated access review evaluates a sample of user and system access records for a fictional financial-services organization. The review focuses on business need, manager approval, MFA, privileged access, segregation of duties, and identity lifecycle controls.

Important: All users, systems, approvals, dates, findings and risks are fictional. This is a portfolio exercise and not a real production access review.

Key Findings

Priority	Finding	Management Focus
Critical	Former employee account remains active	Disable immediately, investigate activity, and validate the offboarding process.
Critical	Privileged access creates an SoD conflict	Remove conflicting entitlement and establish independent approval.
High	Cloud administrator access is broader than job need	Reduce role scope and use just-in-time privileged access where feasible.
High	Contractor access has no defined expiry	Implement sponsor ownership and automated expiration.
Medium	Access recertification evidence is incomplete	Standardize periodic manager certification and evidence retention.

Review Methodology

The assessment compared sampled access records against stated business need and reviewed manager approval, MFA status, privileged status, segregation-of-duties conflicts, employment status, and contractor lifecycle information. Exceptions were risk-rated and assigned owners and target timeframes.

Remediation Roadmap

Timeframe	Priority Actions
Immediate	Disable former-employee account; review related activity and document offboarding remediation.
0–30 days	Resolve SoD conflicts, reduce excessive privileged access, and establish contractor expiry controls.
31–60 days	Standardize periodic access certification and retain manager approval evidence.

Skills Demonstrated

IAM access reviews, least privilege, privileged access management, segregation of duties, access recertification, identity lifecycle controls, risk assessment, remediation planning, Excel-based analysis, and executive reporting.
